

Botox Treatments

Botox injections are noted primarily for the ability to reduce the appearance of facial wrinkles. They're also used to treat conditions such as neck spasms (cervical dystonia), excessive sweating (hyperhidrosis), an overactive bladder and lazy eye. Botox injections may also help prevent chronic migraines.

Is Botox Treatment Safe?

Botox is considered safe overall. You should always go to a board certified dermatologist or plastic surgeon for Botox injections. You're more likely to experience adverse side effects if your injections aren't prepared according to FDA standards or injected by an inexperienced healthcare professional.
